

If you're looking for SMS solutions and options to reduce your workload, while substantially increasing your SMS's overall performance and value, we can help.

After implementing hundreds of SMS programs it became clear to us that most small flight departments were not staffed or fully equipped to manage their programs internally. So we built several services based on their specific needs, which have evolved over a decade and a half to become the most cost effective and comprehensive SMS support programs available.

The **S.A.F.E. Program** handles all of the administrative and documentation requirements of SMS, provides regular safety training bulletins, and is available 24/7 in the event you need us.

The **Collaborative Management Program** is our flagship program. It is like hiring a full-time safety officer, without the hassle or the expense. The program is a turn-key solution that provides full SMS oversight

and includes an annual IASE audit, continuous safety training, data collection and analysis, trend-monitoring, corrective action planning and annual CRM & SMS recurrent training.

The **IASE program** is the right choice if you're looking for an SMS tune-up, that provides training, updates and confirmation of conformity declaration that ensures your program meets the latest standard.

And finally, we've known for decades that professional pilots don't have accidents because they aren't current, qualified and proficient. It's largely due to failures of our *soft* or human skills. Things like judgement, decision making, communication, and assertiveness. Those *human* skills can be improved, so we put together a robust one-day **CRM recurrent** program that we believe will be the most important training you'll receive all year long.

With 18 years of hands-on SMS experience and 25 years of flight and maintenance operational experience, we can provide our programs virtually or onsite. Either way, the end result is the same—*Peace of Mind*.

Call or email us today and we'll be happy to send you a detailed program description.
